# eCONNECTOR

E-Connector provides the most Comprehensive platform for Bank & Financial Institutes to perform their payments in a robust and efficient manner. E-Connector provides comprehensive access to the Lankapay CEFT system – Through this integration, the Financial Institution (FI) is able to initiate EFT credit transactions and EFT debit transactions from any channel.

The E-Connector was developed to facilitate the payment requirements amongst the banks and financial institutions of Sri Lanka. This solution also simplified the connectivity to the Lanka pay platform.

The E-Connector comprises of 4 modules:

- E-Switch (E-Switch)
- Administrative Web Application
- API Services to connect front-end channels
- Web Portal for Branch Tellers

Key Features

Payment Scheduler (Bulk Payment) allows capability to configure aspects related to bulk payments including the ability to predetermine a time for the bulk payment to be processed.
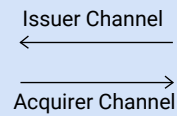

Transaction Rerun Initiator facilitate the automated re - initiation of transactions that have been done over the counter and configure the amount of retries applicable for the transaction

Fee Deduction Service create profiles against the different transaction types that are entailed within the solution.

Dual Transaction Legs Manager platform can be configured to facilitate both the debit and the credit legs.

Reconciliation Engine reconcile transactions, identify shortfalls, and call issues to the attention of the appropriate entity for immediate resolution, easily and automatically.

GL Manager can dynamically relay the transaction to the relevant GL entry that has been setup for the transaction (depending on the configuration)
